CustomLift@peerlesschain.com

Peerless Industrial Group, Inc. is the leading designer and manufacturer of Below the Hook Lifting and Material Handling Equipment. Lifting and material handling devices are used in almost every type of manufacturing environment and are used in conjunction with hoists, cranes, and fork trucks along with standalone applications.

Our ISO 9001 certified factory located in **South Holland Illinois**, has been manufacturing high-quality overhead lifting and material handling devices for over 50 years. The facility is equipped with the most up to date manufacturing processes and equipment in areas such as:

**machining,
metalworking,
and welding.**

Select equipment from our comprehensive standardized product catalog which features our "QUICK SHIP" and "IN STOCK" PROGRAMS. We also can design and manufacture a "CUSTOM LIFTING DEVICE" to fit your specific application using materials from carbon, alloy, or stainless steel.

- All designs are engineered in accordance with ASME B30.20 / BTH-1 and incorporate application conditions along with a detailed analysis of allowable stresses to determine fatigue life
- Standard products are designed to ASME BTH-1 Design Category B Service Class 2
- Greater Design Categories and Service Classes are available
- All welding is performed by certified welders in accordance with AWS D14.1/D14.1M/D1.6 and ASME BTH-1
- All Peerless Below-the-Hook lifting devices are tagged in accordance with ASME B30.20
- All Peerless Below-the-Hook Lifting devices are Proof-Tested to 125% capacity and certificates are supplied at "NO ADDITIONAL CHARGES"

Our qualified staff has the expertise to design and manufacture exceptional quality products, quickly and competitively, to satisfy the individual requirements of customers within many different industries.

- Renewable Energy
- Construction
- Automotive
- Military
- Chemical
- Steel Service
- Aerospace
- Industrial
- Agricultural
- Marine
- Machinery
- Petroleum
- Food Industry
- Paper Mills
- Heavy Truck
- Transportation

Whether you choose from our extensive selection of standardized lifting solutions that include:

- Lifting Beams
- Spreader Beams
- Roll Lifters
- Coil Lifters
- Tongs
- Sheet Lifters
- Pallet Lifters
- Fork Truck Accessories

Or from our line of Material Handling Equipment:

- Material Stands
- Material Baskets

SELECT A LIFTING SOLUTION THAT IS DESIGNED AND MANUFACTURED TO MEET YOUR SPECIFIC NEED.

Peerless Industrial Group has
OVER 100 YEARS OF EXPERIENCE.

Our combined Qualified Sales, Engineering, and Manufacturing staff are available to solve all your Below-the-Hook Lifting and Material Handling Equipment requirements.

Contact your nearby Peerless Distributor or visit our website at www.peerlesschain.com

PEERLESS
A KITO GROUP COMPANY

Select products from our standard offering or we can design and manufacture a custom lifting device to fit your specific application from carbon, alloy, stainless, aluminum, or other specialty metals. Our experienced sales, engineering, and manufacturing staff are available to solve all of your below-the-hook lifting requirements.

- 100% of ALL Peerless lifting products are proof-tested.
- Horizontal proof test capabilities up to 1,200,000 lbs.
- Vertical proof test capabilities up to 450,000 lbs & 40 feet in length.
- Certified to OSHA & ASME Standards.
- Capable of manufacturing to government & military specifications.
- Capable of bending up to 5" diameter round bar.
- We offer safety training & inspection services both in-house & on-site, including repairs & modifications.

SSLB SHORT SPAN LIFTING BEAM PLATE STYLE

 Products eligible for Quick Ship display QS icon.

FEATURES

- This style of lifting beam is ideal for short span applications and can be utilized where headroom is limited.
- Supplied with a pair of shackles and one standard spread.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Additional lift points
- Higher capacities (supplied w/upper shackle)
- Additional lengths
- Upper shackle
- Upper shackle w/oblong link
- Hooks

SDLB STANDARD DUTY LIFTING BEAM I-BEAM DESIGN w/PIN BAIL

FEATURES

- This style of lifting beam can be utilized where headroom is limited & comes with a pair of shackles and three standard spreads.
- Standard I-Beam construction with pin bail & integrated beam stands.
- Three standard lift points for load adjustment: outside lift point, middle lift point (outside less 1'), inside lift point (middle less 1').
- Engineered & manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Additional lift points
- Higher capacities
- Additional lengths
- Swivel hooks
- Additional shackles

LIFTING EQUIPMENT

DCLB

DUAL CRANE LIFTING BEAM cont.

FEATURES

- This style of lifting beam is utilized with two cranes, where headroom is limited, and comes with a swivel hook.
- Roller bearing, which rotates under load, is standard on capacities 30 tons and over.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Additional lift points
- Higher capacities
- Additional lengths
- Center bail
- Additional hooks
- Integrated beam stands

UNVB

UNIVERSAL LIFTING/SPREADER BEAM

FEATURES

- This style of universal beam can be utilized as a lifting beam where headroom is limited or a spreader beam where extra stability is required.
- As a lifting beam, the upper lift point can be easily adjusted to lift an off center load.
- Can be configured as an optional three or four point lifting system
- Can be supplied with optional chain top rigging.
- Supplied with one upper shackle for adjustable bail positions and two lower shackles for adjustable spreads.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Chain top rigging
- Three point lifting system
- Four point lifting system
- Additional lift points and spreads
- Higher capacities
- Additional lengths
- Swivel hooks

LIFTING EQUIPMENT

LOAD LEVELING BEAM

FEATURES

- This style of lifting beam can lift off center loads easily by adjusting the bail with the standard chain wheel **PRIOR TO THE LIFT** and has unlimited adjustment within the span of the bail.
- This lifter can be used where headroom is limited, and comes standard with one outside spread and two swivel hooks (additional spreads and swivel hooks are available).
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Additional lift points
- Higher capacities
- Additional lengths
- Lower headroom bail
- Additional hooks
- Additional load pins

LIFTING EQUIPMENT

TPLB

THREE POINT LIFTING BEAM

FEATURES

- This style of lifting beam can be utilized where headroom is limited and when lifting objects that require multiple lift points.
- Designed to meet your specific lifting requirements.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Multiple lift points
- Dual bails
- Lower headroom bail
- Adjustable spread
- Adjustable bail
- Swivel hooks
- Shackle lugs
- Additional load pins
- Beam stand

Dual Bail Option

Utilizes multiple hoists to add stability to the lift.

Adjustable Bail Option

Adjust bail for offset center of gravity.

Y-Style Option

Commonly used for lifting circular lift point patterns.

Adjustable Lift Points Option

Adjust lower lift points for different load lengths/widths.

FPLB FOUR POINT LIFTING BEAM

FEATURES

- This style of lifting beam can be utilized where headroom is limited and when lifting objects that require multiple lift points.
- Designed to meet your specific lifting requirements.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Multiple lift points
- Dual bails
- Lower headroom bail
- Adjustable spread
- Adjustable bail
- Swivel hooks
- Drop chains
- Shackle lugs
- Beam stand

Adjustable Bail Option

Adjust bail for offset center of gravity.

Dual Bail Option

Utilizes multiple hoists to add stability to the lift.

Adjustable Lift Points Option

Adjust lower lift points for different load lengths/widths.

X-Style Option

Typically used for circular pick point patterns.

WARNING

DO NOT EXCEED CAPACITY!
See the SAFETY GUIDELINES section before using these products. Pages 88-90.

FPSL

FOUR POINT SACK LIFTER BEAM

QS Products eligible for Quick Ship display a QS icon.

FEATURES

- This style of lifting beam is designed to lift bulk container sacks.
- Standard Sling Keeper design provides improved sling containment during the lift.
- Low headroom design that meets metric rating requirements.
- Smooth edge design to minimize wear on lifting straps.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Sling spacers
- Low to negative headroom designs
- Additional sizes and styles are available

FPAB FOUR POINT ADJUSTABLE BEAM

FEATURES

- This standard four point adjustable bail and spread style of lifting beam can be utilized where headroom is limited and when lifting objects that require multiple lift points.
- Supplied with four swivel hooks.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Beam stand
- Additional sizes and options are available

LIFTING EQUIPMENT

DCRB

DUAL CRANE ROTATING BEAM

FEATURES

- This style of lifting beam is designed to be utilized with dual hoists and can rotate the load parallel.
- Designed to meet your specific lifting requirements.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Dual hooks
- Low headroom bail
- Swivel hooks
- Shackle lugs
- Load pins
- Beam stand

Dual Hooks Option

Utilizes dual hooks for lifting slings in a basket hitch configuration.

Plate Style Hook Option

Utilized when lifting rolls by the mandrel or shaft.

CHLORINE GAS CYLINDER LIFTING BEAM

QS Products eligible for Quick Ship display a QS icon.

FEATURES

- This style of lifting beam is designed to lift chlorine gas cylinders.
- Low headroom design.
- Smooth edge design to minimize wear on lifting straps.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Fork lift pockets available

LIFTING EQUIPMENT

SDSB

STANDARD DUTY SPREADER BEAM

QS Products eligible for Quick Ship display a QS icon.

FEATURES

- This style of lifter is utilized with upper rigging spread between two lift points that lowers the center of gravity and adds extra stability to the lift.
- This spreader beam should be utilized where headroom is not limited and comes standard with a pair of swivel hooks.
- Can be supplied with optional chain or wire rope top rigging.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Higher capacities
- Additional lengths
- Upper and lower shackle design
- Chain top rigging
- Wire rope top rigging

Upper and Lower Shackle Option

Utilizes dual upper and lower shackles for connecting the rigging.

ATSB

ADJUSTABLE TELESCOPIC SPREADER BEAM

FEATURES

- This style of spreader beam is telescopic to accommodate various load sizes – 2 through 15 ton capacities, adjustable increments at 1" and 20 through 40 ton capacities, adjustable increments at 12".
- This style of lifter is utilized with upper rigging spread between two lift points that lowers the center of gravity and adds extra stability to the lift.
- This spreader beam should be utilized where headroom is not limited and comes with a pair of swivel hooks.
- Can be supplied with optional chain or wire rope top rigging.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Higher capacities
- Upper and lower shackle design
- Chain top rigging
- Wire rope top rigging

Upper and Lower Shackle Option

Utilizes dual upper and lower shackles for connecting the rigging.

BXSB BOX SPREADER BEAM

FEATURES

- This style of spreader beam is designed to lift large uneven loads and can be rigged to handle objects with an offset center of gravity.
- Designed to meet your specific lifting requirements and can be manufactured in a welded or bolt together design.
- If adjustability is required, this style of box spreader beam can be designed with telescopic lengths and/or widths to accommodate various load sizes.
- This spreader beam should be utilized where headroom is not limited.
- This style of lifter is utilized with upper rigging spread between four lift points that lowers the center of gravity and adds extra stability to the lift.
- Can be supplied with chain or wire rope top rigging.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Higher capacities
- Additional lengths
- Upper and lower shackle design
- Chain top rigging
- Wire rope top rigging

Shown with optional bolt up design.

DO NOT EXCEED CAPACITY!
See the SAFETY GUIDELINES section before using these products. Pages 88-90.

LIFTING EQUIPMENT

ECSB END CAP SPREADER BEAM

FEATURES

- This style of lifter is utilized with upper rigging spread between two lift points that lowers the center of gravity and adds extra stability to the lift.
- This spreader beam should be utilized where headroom is not limited and comes standard with upper and lower shackles.
- Standard pivoting lifting lugs provide the flexibility of a 75° to 90° lower rigging angle.
- Can be supplied with optional chain or wire rope top rigging.
- Engineered and manufactured in accordance to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Higher capacities
- Additional lengths
- Chain top rigging
- Wire rope top rigging

LIFTING EQUIPMENT

EC END CAP

FEATURES

- This style of lifting component supplied in pairs allows the user to assemble their own spreader beam by incorporating A53 Grade B, schedule 80 pipe along with upper and lower rigging.
- This style of spreader beam when assembled adds extra stability to the lift.
- This assembled spreader beam should be utilized where headroom is not limited and comes standard with upper and lower shackles.
- Standard pivoting lifting lugs provide the flexibility of a 75° to 90° lower rigging angle.
- Includes standard assembly pins used to attach the End Cap to the A53 Grade B, schedule 80 pipe.
- Can be supplied with optional upper and lower shackles.
- Can be supplied with optional chain or wire rope top rigging.
- Engineered and manufactured in accordance to ASME B30.20 & BTH-1 Design Category B Service Class 2 and complies when assembled per factory specifications.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Higher capacities
- Upper and lower shackles
- Chain top rigging
- Wire rope top rigging

ECP END CAP PIPE

FEATURES

- This style of lifting component, A53 Grade B, schedule 80 pipe, allows the user to assemble their own spreader beam by attaching specified Peerless End Caps along with upper and lower rigging.
- This style of spreader beam when assembled adds extra stability to the lift.
- This assembled spreader beam should be utilized where headroom is not limited and comes standard with upper and lower shackles.
- Can be supplied with optional End Caps.
- Can be supplied with optional upper and lower shackles.
- Can be supplied with optional chain or wire rope top rigging.
- Complies with ASME B30.20 & BTH-1 Design Category B Service Class 2 when assembled per factory specifications.
- 100% of ALL Peerless End Cap Pipe is certified to the material specification supplied by the pipe manufacturer as well as for the working load limit that is listed in the End Cap Pipe chart when used in conjunction with the specified End Caps at the appropriate rigging angles.

OPTIONS

- Higher capacities
- Upper and lower shackles
- Chain top rigging
- Wire rope top rigging

SPREADER BEAMS

Custom Application Form

PEERLESS
A KITO GROUP COMPANY

For pricing information: Fax completed form & contact info to (800)-356-1149

LOAD INFORMATION:

Describe the material you are planning to lift: _____

Spreader Beam Stand Required: ☐ Yes ☐ No

Total Number of Lifting Points: _____ Spacing Between Points _____

Is The CG (center of gravity) Of The Load Between Outer Lifting Points:

☐ Yes ☐ No If No, Describe CG Location _____

Rigging Type Used To Attach To Load: ☐ Swivel Hooks ☐ Shackles

☐ Slings (specific type) _____ ☐ Other (specific type) _____

Rigging Type Used To Attach To Crane Hook: ☐ Chain ☐ Wire Rope

Desired Rigging Angle (45 degree recommended): _____

Load Dimensions:

	Min (in)	Max (in)
Height		
Width		
Length		
Weight		

CRANE SPECIFICATIONS:

Distance Between Top Of The Load To The Crane Hook High Position(s): _____

Capacity Of The Crane(s): _____

Required Duty Cycle Of The Spreader Beam: Lifts Per Hour _____ Lifts Per Day _____

Crane Classification(s): ☐ A ☐ B ☐ C ☐ D ☐ E ☐ F

CRANE HOOK SPECIFICATIONS (Inches):

A: _____ B: _____ C: _____ D: _____ E: _____ F: _____ G: _____ H: _____

Please provide pertinent application information not supplied above (extreme product or operating temperature, extreme environmental conditions such as temperature or moisture, space or headroom restrictions, additional specifications):

LIFTING EQUIPMENT

ROLL LIFTING BEAM

FEATURES

- This style of lifting beam is designed to easily lift and position rolls by the mandrel/shaft (when it is through the center of the roll) with plate style hooks.
- It can be utilized where headroom is limited and comes with a pair of fixed or pivoting plate style hooks.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Adjustable spread
- Higher capacities
- Additional lengths
- Lower headroom bail
- Twin bail designed for two hoists
- Spreader beam design with top rigging
- Additional hooks
- Urethane or bronze hook linings
- Beam stand

Adjustable Spread Option

Allows the lifter to handle rolls of varying widths.

Hook Lining Option

Utilizes bronze or urethane linings to provide additional protection to the mandrel or shaft.

Dual Bail Option

Utilizes multiple hoists to add stability to the lift.

Spreader Beam Design Option

Provides greater stability when headroom is not limited.

MRL MOTORIZED ROLL LIFTER

FEATURES

- This style of lifter is designed to easily lift and position rolls by placing the lifting pins securely through the I.D. of the roll.
- Capacities at 5 tons and below
- Designed to meet your specific roll lifting requirements.
- Can be utilized for a variety of roll widths where aisle clearance is limited.
- Manual chain wheel operation is available.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Parking and/or maintenance stands available
- Additional bail styles available

WARNING

DO NOT EXCEED CAPACITY!
See the SAFETY GUIDELINES section before using these products. Pages 88-90.

LIFTING EQUIPMENT

RGT 

ROLL GRIPPING TONGS

FEATURES

- This style of lifter is designed to easily lift and position rolls by gripping the outer diameter of the roll.
- Designed to meet your specific roll lifting requirements.
- Can be utilized for a variety of roll widths where aisle clearance is limited.
- Auto-latching mechanism supplied for easy one-person operation.
- Protective linings are available to minimize roll damage.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Parking and/or maintenance stands available

RLCH ROLL LIFTING C-HOOK

FEATURES

- This style of lifter is designed to easily lift and position rolls by placing the lifting arm securely through the I.D. of the roll.
- Supplied standard with lifter guide handle.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Higher capacities
- Additional lengths
- Larger throat opening
- Protective padding
- Parking stands

WARNING

DO NOT EXCEED CAPACITY!
See the SAFETY GUIDELINES section before using these products. Pages 88-90.

LIFTING EQUIPMENT

CLNC COIL LIFTER NARROW COIL

 Products eligible for InStock display an IS icon.

FEATURES

- This style of lifter is designed to easily lift and position narrow coils by placing the lifting arm securely through the I.D. of the coil.
- Supplied with standard lifter guide handle and radius on lifting arm to minimize coil damage.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Higher capacities
- Additional lengths
- Higher throat sizes
- Protective padding
- Coil retainer cap
- Parking stands

FEATURES

- This style of heavy duty lifter is designed to easily lift and position large heavy coils by placing the lifting arm securely through the I.D. of the coil.
- Supplied with standard lifter guide handle and curved saddle on lifting arm to minimize coil damage, optional padding is available for additional coil protection.
- Counterbalanced to hang level when not loaded.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

LIFTING EQUIPMENT

COIL LIFTER CLOSE STACKING

FEATURES

- This style of heavy duty lifter is designed with a recessed counterweight to allow for close coil stacking that maximizes floor space.
- Designed to easily lift and position large heavy coils by placing the lifting arm securely through the I.D. of the coil.
- Supplied with standard lifter guide handle and curved saddle on lifting arm to minimize coil damage, optional padding is available for additional coil protection.
- Counterbalanced to hang level when not loaded.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

CLSC COIL LIFTER SLIT COIL

FEATURES

- This style of heavy duty lifter is designed to handle multiple slit coils maximizing efficiency.
- Designed to easily lift and position large heavy slit coils by placing the lifting arm securely through the I.D. of the coil.
- Supplied with standard lifter guide handle and curved saddle on lifting arm to minimize coil damage, optional padding is available for additional coil protection.
- Counterbalanced to hang level when not loaded.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

LIFTING EQUIPMENT

CGV COIL GRAB VERTICAL

FEATURES

- This style of lifter is designed to handle coils that are stacked vertically.
- Supplied with manual adjusting legs that adjust to the I.D. of the coil with the standard hand wheel or optional chain wheel.
- Can be supplied with optional motorized leg drive.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Higher & lower capacities
- Additional lengths

COIL LIFTER TELESCOPIC TWO-SIDED

FEATURES

- This style of lifter is designed to efficiently handle coils with the inside diameter.
- The manual adjusting legs adjust to the I.D. of the coil with the standard chain wheel or an optional motorized leg drive and require less aisle space for operation.
- The self-locking gear drive prevents the inadvertent opening of the legs and curved foot pad minimizes coil damage.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Higher capacities
- Additional lengths
- Protective padding
- Parking stands
- Motorized leg drive

LIFTING EQUIPMENT

NACL NARROW ARM COIL LIFTER

FEATURES

- This style of lifter is designed to efficiently handle coils with the inside diameter.
- The manual adjusting hooks easily adjust to the length of the coil and require less aisle space for operation.
- Supplied with standard plate style hooks with rounded corners to minimize coil damage. (Round bar hooks can be supplied as an option).
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

BELOW THE HOOK LIFTING AND MATERIAL HANDLING EQUIPMENT

Engineered designs are in accordance with ASME B30.20 / BTH-1 and incorporate operation conditions along with a detailed examination of allowable stresses to determine fatigue life. Standard products are designed to ASME BTH-1 Design Category B / Service Class 2. Greater Design Categories and Service Classes are available.

All welding is performed by certified welders in accordance with AWS D14.1/D14.1M and ASME BTH-1.

All Peerless Below-the-Hook lifting devices are tagged in accordance with ASME B30.20.

BAR TONG ADJUSTABLE

FEATURES

- This style of adjustable diameter tong is ideal for lifting round bars, cast or steel pipe of various diameters.
- Hold open latch supplied on all 1 ton standard tongs.
- Can be supplied with optional replaceable urethane pads for additional load protection.
- The load must be balanced during the lift.
- Can be used in pairs attached to a lifting/spreader beam to handle longer loads.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Replaceable urethane pads
- Hold open latch
- Higher capacities available

SLHD

SHEET LIFTER HEAVY DUTY.....Page 63

MSLHD

MOTORIZED SHEET LIFTER HEAVY DUTY.....Page 64

SLHD SHEET LIFTER HEAVY DUTY

FEATURES

- This style of lifter is designed to lift and carry various sizes of bundles, sheets, and/or plates.
- Standard heavy duty direct drive, self-locking, machined rack and pinion leg adjustment.
- Standard heavy duty square tube H-Frame design.
- Easily maintained low headroom design.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- Load chains standard on all units with load widths capabilities of 72" or greater.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Chain wheel leg drive
- Extended hand wheel or chain wheel
- Extended shoe lengths
- Extended leg heights
- Load chains with plate hooks
- Heavy-duty hand-wheel package with slip clutch

MSLHD

MOTORIZED SHEET LIFTER HEAVY DUTY

FEATURES

- This style of lifter is designed to lift and carry various sizes of bundles, sheets, and/or plates.
- Standard heavy duty direct drive, self-locking, machined rack and pinion leg adjustment.
- Standard heavy duty square tube H-Frame design.
- Standard heavy duty motor package with slip clutch to prevent damage to gearboxes from over adjustment. Includes 460 Volt 3-Phase 60Hz motor
- Easily maintained low headroom design.
- Load chains standard on all units with load widths capabilities of 72" or greater.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Extended shoe lengths
- Extended leg heights
- Load chains with plate hooks
- Pendant w/cord & electrical controls
- Additional voltages

SHEET LIFTER

Custom Application Form

PEERLESS
A KITO GROUP COMPANY

For pricing information: Fax completed form & contact info to (800)-356-1149

LOAD INFORMATION:

Describe the material you are planning to lift: _____

Material Conditions: ☐ Banded ☐ Loose ☐ Dry ☐ Oily

Manual (adjustment): ☐ Yes ☐ No

If Yes: Max Temp ____ Req Contact Time ____ Min Time Between Lifts ____

Will Individual Sheets Be Handled? ☐ Yes ☐ No

If Yes: Individual Sheet Plate Thickness (inches) Max ____ Min ____

Is The Load Palletized? ☐ Yes ☐ No

If Yes: Pallet Dimensions (inches) Height ____ Width ____ Length ____ Weight ____

Bundled Load Dimensions:

	Min (in)	Max (in)
Height		
Width		
Length		
Weight		

SHEET LIFTER SPECIFICATIONS:

Operation: ☐ Manual ☐ Motorized ☐ Hydraulic

If Manual (adjustment): ☐ Hand Wheel ☐ Chain Wheel ☐ Extended Reach

If Motorized: ☐ AC ☐ DC Voltage ____ Phase ____ Cycle ____

If Yes Specify Type ____ ☐ Furnish Loose ☐ Mounted On Lifter

Controls Required: ☐ Yes ☐ No

Load Chains With Plate Hooks: ☐ Yes ☐ No

Distance Between Top Of The Load To The Crane Hook High Position(s): _____

Capacity Of The Crane(s): _____

Required Duty Cycle Of The Sheet Lifter: Lifts Per Hour ____ Lifts Per Day ____

Crane Classification(s): ☐ A ☐ B ☐ C ☐ D ☐ E ☐ F

CRANE HOOK SPECIFICATIONS (Inches):

A: ____ B: ____ C: ____ D: ____ E: ____ F: ____ G: ____ H: ____

Please provide pertinent application information not supplied above (extreme product or operating temperature, extreme environmental conditions such as temperature or moisture, space or headroom restrictions, additional specifications):

LIFTING EQUIPMENT

FIXED FORK PALLET LIFTER

FEATURES

- This style of lifter is designed to lift and carry palletized loads efficiently with an overhead crane.
- Counter balanced to hang level when unloaded.
- Easily maintained low headroom design.
- The bail is a lower headroom design and is positioned to avoid side loading the crane hook.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Larger throat openings
- Greater outside fork widths
- Additional sizes and capacities available

LIFTING EQUIPMENT

PLWL WHEELED PALLET LIFTER

FEATURES

- This style of lifter is designed to lift and carry palletized loads efficiently with an overhead crane.
- Wheeled design allows for ease of movement to the load and dual lift points allow the lifter to hang level when unloaded.
- Easily maintained low headroom design.
- Engineered and manufactured to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

OPTIONS

- Larger throat openings
- Replacement wheel kits are available
- Greater outside fork widths
- Additional sizes and capacities available

TELESCOPING FORK TRUCK BOOM

FEATURES

- This style of fork truck attachment is designed to efficiently lift and carry loads with a telescoping boom with locking pin allowing for multiple hook positions.
- 12' maximum boom reach and supplied with standard swivel hooks.
- Supplied with standard restraining chain with grab hook and attached handle for ease of boom extension.
- Engineered and manufactured in accordance to ASME B30.20 & BTH-1 Design Category B Service Class 2.
- **Proof-Tested to 125% capacity and certificates supplied at No Additional Charge.**

MATERIAL HANDLING

MATERIAL STANDS HEAVY DUTY

FEATURES

- This style of material handling equipment is designed to hold product at a preset work height.
- Designed and manufactured in pairs to meet your specific height and capacity requirement.
- Standard heavy duty welded steel design.
- Standard rated capacity labels.
- Engineered and manufactured in accordance to ASME B30.20 & BTH-1 Design Category B Service Class 2.

OPTIONS

- Fork lift transport pockets
- Unpainted tab used for welding
- Spring loaded caster wheels
- Protective padding

SAFETY GUIDELINES

INDUSTRY STANDARDS

The American Society of Mechanical Engineers (ASME) developed standards that apply specifically to the devices Peerless Industrial Group designs and manufacturers. These standards serve as a guide to government authorities, manufacturers, purchasers and operators of below-the-hook lifting devices.

ASME B30.20

- Provides detailed information on the classifications, marking, construction, installation, inspection, testing, maintenance and operation of below-the-hook lifting devices.

ASME BTH-1

- Provides detailed information on the design criteria of below-the-hook lifting devices.

MARKINGS, IDENTIFICATION & GENERAL CONSTRUCTION

The rated load of the lifting device is visibly marked on the main structure of the device, as well as on a tag attached to the lifter. If the below-the-hook lifting device consists of individually detachable lifters, then each of the individual lifters shall be marked and tagged with their individual rated loads.

All Peerless Industrial Group below-the-hook lifting devices are tagged with the following information:

- Manufacturer's name and address
- Serial number
- Lifter weight, if over 100 lbs. (45 kg)
- Cold current (amps) (when applicable)
- Rated voltage (when applicable)
- Rated load
- Manufacture date
- ASME BTH-1 Design category
- ASME BTH-1 Service class

All Peerless structural and mechanical lifting devices are designed and manufactured by qualified personnel. Peerless engineered designs are in accordance with ASME B30.20 / BTH-1 and incorporate operation conditions along with a detailed examination of allowable stresses to determine fatigue life. Standard products are designed to ASME BTH-1 Design Category B / Service Class 2. Greater Design Categories and Service Classes are available.

DESIGN CATEGORY

Design category B shall be utilized when the size, scale, and variation of loads applied to the lifter are not always predictable or clearly defined, and where the environmental and loading conditions vary or could be severe.

SERVICE CLASS

- Service Class is determined by the specified fatigue life of the lifter.
 - Service Class 0 is 0 to 20,000 load cycles.
 - Service Class 1 is 20,001 to 100,000 load cycles.
 - Service Class 2 is 100,001 to 500,000 load cycles.
 - Service Class 3 is 500,001 to 2,000,000 load cycles.
 - Service Class 4 is over 2,000,000 load cycles

SERVICE CLASS LIFE

Cycles Per Day	Desired Life (Years)				
	1	5	10	20	30
5	0	0	0	1	1
10	0	0	1	1	2
25	0	1	1	2	2
50	0	1	2	2	3
100	1	2	2	3	3
200	1	2	3	3	4
300	2	3	3	4	4
750	2	3	4	4	4
1,000	2	3	4	4	4

All welding shall be in accordance with AWS D14.1/ D14M and ASME BTH-1.

Exposed moving parts such as gears, projecting shafts and chain drives that constitute a hazard under normal operating conditions are guarded.

Electrical equipment and wiring shall comply with ANSI/ NFPA 70 and ASME BTH-1.

FOR INFORMATION ON MODIFICATIONS OR REPAIRS TO YOUR LIFTING DEVICE, CONTACT PEERLESS INDUSTRIAL GROUP TO ENSURE COMPLIANCE WITH THE CURRENT ASME STANDARDS

PROOF TEST

100% OF ALL PEERLESS BELOW-THE-HOOK LIFTING DEVICES ARE PROOF-TESTED TO 125% CAPACITY AND CERTIFICATES SUPPLIED AT NO ADDITIONAL CHARGE.

Requirements & Recommendations:

Requirements of the ASME standard are noted by the word **shall**.

Recommendations of the ASME standard are noted by the word **should**.

OPERATION PRACTICES FOR LIFTING DEVICES

Below-the-hook lifting devices shall only be operated by the following qualified personnel:

- Personnel designated to operate the lifter.
- Trainees who are under the direct supervision of designated personnel.
- Personnel designated to maintenance and/or conduct testing on the lifter.
- Personnel designated to inspect the lifter.

The operator shall ensure that the weight of the load to be lifted along with its approximate center of gravity have been provided, calculated, or obtained.

The below-the-hook lifting device shall not be overloaded beyond its manufactured rated capacity nor shall it be utilized to handle any load that it was not designed to handle.

The operator shall ensure the lifting device is properly attached to the hook, shackle, or other load handling device.

The operator shall ensure that the lifter is applied to the load in accordance with the instruction manual.

When rigging is utilized in conjunction with the lifter, the operator shall ensure that it is not kinked and the multiple part lines are not twisted around each other.

The operator shall ensure that the load is correctly distributed for the lifter prior to the lift.

The operator shall ensure that the temperature of the load does not exceed the maximum allowable limits of the lifting device.

The operator shall ensure that the load is properly balanced and well secured with the lifting device at the onset of the lift.

The operator shall ensure that the lifter and the load do not come into contact with any obstruction.

The operator shall ensure that the lifter is sufficiently protected from damage during use.

The operator shall ensure that the lifter is not utilized for side pulls or sliding the load unless explicitly authorized by a qualified person.

Before leaving the lifter the operator shall land any attached load and store the lifter in an assigned location. The operator shall ensure that suspended loads are not left unattended.

The operator shall ensure that no person rides the load or the lifter.

The operation of the lifter shall be observed prior to and during a shift. Any observed deficiency in the lifter shall be examined by designated personnel. Any deficiency that constitutes a hazard shall be removed from service and tagged "Out of Service". All hazardous deficiencies shall be reported to qualified personnel for evaluation.

All loads shall be guided in a manner to avoid endangering any part of the body as it is moved, lowered, or if it is accidentally dropped.

Miscellaneous Operating Practices

An operator shall not utilize a below-the-hook lifter that has an "out of service" tag or has been designated as non-functioning.

Only designated personnel shall be given the authority to remove "Out of service" tags on lifting devices.

When not in use the below-the-hook device should be stored in an assigned location.

Lifter markings and tags shall not be removed or damaged. Lifter markings and tags that are missing or illegible shall be replaced.

INSPECTION

Initial Inspection:

Prior to initial use, all new, altered, modified, reinstalled, or repaired lifting devices shall be inspected by a qualified person to ensure compliance with the provisions of the ASME B30.20 standard.

Inspection Intervals:

Below-the-hook lifters in regular service require three general types of inspection classification procedures; every lift, frequent, and periodic. The intervals for inspection are determinant upon the severity of use of the below-the-hook device, the extent of the exposure to wear and tear, as well as any history of malfunction experienced by the lifter.

cont.

SAFETY GUIDELINES

Every Lift Inspection:

A visual examination performed by the operator of the below-the-hook lifter conducted prior to and during every lift.

Frequent Inspection:

Are comprised of visual inspections performed by either the lifter operator or other assigned personnel (records are not required by the ASME standard).

- Normal use – once a month
- Heavy use – once a week to once a monthly
- Severe use – once a day to once a week
- Special or infrequent use – outlined as specified by a qualified individual prior to and following each use.
- Any lifter that has been idle for a period of one month to a year shall undergo a frequent inspection prior to use.

The following items listed below shall be included within the regular inspection schedule and shall be thoroughly inspected and an assessment formed as to the extent of the issue and the level of subsequent hazard resulting from it.

- Structural deformation
- Cracks in welds or structural members
- Excessive wear
 - Loose or missing parts, tags, safety guards, fasteners, stops, and/or housings..
 - Out of adjustment conditions that interfere with the normal operation and functionality of all mechanisms including automatic hold and release components.
 - Unreadable or missing operating control labels.
 - Contact Peerless Industrial Group for replacements of missing identification tags and nameplates.

Periodic Inspections:

Are comprised of visual inspections performed by assigned personnel who record the current condition of the below-the-hook lifter in order to provide the basis for a continuing program of recorded evaluation. Dated reports for periodic inspections shall be maintained.

- Normal use – annual inspection typically performed on-site.
- Heavy use – disassembly by a qualified individual should be performed semi-annually in order to facilitate a detailed inspection.
- Severe use - disassembly by a qualified individual should be performed quarterly in order to facilitate a detailed inspection.
- Special or infrequent use – outlined as specified by a qualified individual prior to and following each use.

- Any lifter that has been idle for a period of one year or more shall undergo a periodic inspection prior to use.

Below-the-hook lifting devices shall undergo a thorough inspection based upon the previously defined intervals of every lift, frequent, and periodic. Any and all issues such as the following (as listed below) shall be investigated and a conclusion made as to if the extent of the issue and to if it is severe enough in its nature to represent a hazard. Dated inspection reports of the following critical items shall be made.

- All requirements outlined within the frequent inspection process.
- Missing or loose nuts, bolts, or fasteners.
- Fractured gears, pulleys, sheaves, sprockets, bearings, chain and belts.
- Excessive wear of linkages, gears, pulleys, sprockets, sheaves, chain, belts, bearings, hardware, and other mechanical parts.
- Excessive wear at the bail or other load bearing points.
- Unreadable or missing product safety labels, as required by ASME B30.20 standard.

All repairs or modifications shall be documented on dated inspection reports.

MAINTENANCE:

Preventive Maintenance:

A preventive maintenance program shall be established and be based on recommendations made by Peerless Industrial Group. It can be determined to be appropriate as designated by a qualified person to add to the maintenance program following a review of the use of the below-the-hook lifter.

Any hazards disclosed during an inspection shall be corrected before the lifting device is put back into service. Any repairs and/or adjustments shall be done only under the direction of or by a qualified person.

Replacement parts shall be equivalent to the Peerless Industrial Group's specifications.

For more information or to purchase a copy of the standard, visit ASME website, www.ASME.org.

GLOSSARY OF TERMS

Adjustable Bail: Allows the bail to move left or right of the center of the lifter.

Auto-Latch: Used as a mechanical hold in the open position.

Bail: A mounting point on a lifter that attaches the top of a lifter directly to a hoist or crane hook.

Parking Stand: Used to store a lifter when not in use.

Center of Gravity (CG): Is the location of the balance point of a load.

Certificate of Compliance: A document signed by an authorized representative of a manufacturer, certifying that a product or batch of products was manufactured in accordance with all other applicable laws and specifications.

Certificate of Conformance: A document issued by an authorized party or manufacturer and states that the product meets the required standards or specifications.

Certificate of Proof Test: Document that certifies a load test was performed on a lifter.

Chain Top Rigging: Multiple leg chain sling attached to the bails on a lifter brought together as a single lifting point on the lifter.

Chain Wheel: A pocketed wheel that meshes with a chain to transmit motion.

Chamfered Drill Holes: A beveled edge around the hole.

Counter Balance: A weight added to a lifter designed to balance the lifter and the load.

Counter Weight: A weight added to balance a lifter.

Direct Drive: When mechanical parts are driven directly by a motor, without a belt or chain to transmit power.

Drop Chains: Chain slings added to the lower lifting lugs.

Gusset: Steel plates used for strengthening the structure of a lifter.

Headroom: The amount of vertical lift necessary to make and complete a lifting scenario. Considering all things like, the product that is to be lifted, the device doing the lifting, and the amount of free travel space from the crane hoist hook.

H-Frame Design: A structural lifter designed in the shape of the letter "H".

Integrated Beam Stand: A stand built into a lifter used for proper storage of the lifter.

Keyed-In Bail: When a bail fits into a slot cut into the top of the lifter and is welded above and below.

Keyed-In Lug: When a lug fits into a slot cut into the bottom of the lifter and is welded above and below.

Load Pins: Pin used to attach rigging to a lifter.

Low Headroom Bail: Our standard plate bail welded to the top of a lifter.

Lug: The point on a lifter that attaches the lower rigging to the lifter.

Machined Bail: A bail that has a machined radius designed to reduce wear on the saddle of a hoist or crane hook.

Machined Rack and Pinion Adjustment: A machined linear mechanism that is comprised of a circular gear (pinion) that engages with a linear gear (rack).

Off-Center Load: Occurs when the balance point of an object is not located directly in the center of the load.

Pin Style Bail w/Taper: A pin mounted between two gussets designed to provide an easier fit to larger crane hooks, a taper is machined into the pin used to center the hook.

Proof Testing to 125%: of Rated Capacity
A load at 125% of the rated capacity of a lifter is applied to demonstrate the fitness of the lifter.

Recessed Counter Weight: A counter weight that is moved closer to the bail used to reduce overall length of the lifter.

Self-Locking: A lifter or component of that automatically fixes itself in an open or closed position.

Shackle Lug: A mounting point on a lifter that attaches a lifting shackle used connect the bottom of the lifter to the load.

PEERLESS
A KITO GROUP COMPANY

Peerless BTH & Material Handling Equipment
South Holland, Illinois
800-334-5643
CustomLift@peerlesschain.com

Warranty:

The goods sold in this catalog are warranted free from defects in workmanship and materials for 12 months from the ship date.

Disclaimer of warranties:

No other warranty, express or implied, including the implied warranty of merchantability or fitness for particular purpose, is given and no affirmation of Peerless Industrial Group, by words or action, shall constitute a warranty. Peerless Industrial Group will not pay any claim for labor on any of its products or for delays or damages by reason on their use.

Buyer's Remedies:

Buyer's sole remedy for breach of any warranty is limited exclusively to obtaining, at the discretion of Peerless Industrial Group, either repair or replacement of any product sold hereunder and manufactured by Peerless Industrial Group. In no event shall Peerless Industrial Group be liable for any incidental or consequential damages. Buyer must notify Peerless Industrial Group, in writing, within 10 days of discovery of the alleged defect, if within the warranty period stated above. After receiving authorization from Peerless Industrial Group, product shall be returned to the Peerless Industrial Group plant, transportation prepaid, within 30 days.

Return Goods Policy: Items purchased from this catalog are returnable ONLY when pre-authorized by a Peerless Industrial Group Customer Service Representative, who will issue a Return Authorization Number. This number must be displayed PROMINENTLY on the return material shipping containers AND the carrier's freight bill. UNAUTHORIZED SHIPMENTS WILL BE REFUSED AND RETURNED AT THE SENDER'S EXPENSE. All authorized returns must be sent prepaid to Winona, MN, South Holland, IL, Mount Pleasant, PA, or Clackamas OR, and are subject to restocking and repackaging charges. Any product not returned in original saleable condition will be subject to an additional reconditioning charge.

Claims and Shortages: Peerless is willing to assist you in collecting claims for lost or damaged goods, however we are not responsible for collection of claims or replacement of merchandise. All requests for assistance must be accompanied by a copy of the freight bill noting the shortage or damage and signed by the delivering carrier's driver. All requests made to Peerless Industrial Group must be received within 30 days of date of delivery.

Minimum Invoice: The minimum invoice allowed is \$100.
A \$10 charge will be applied to any invoice below this amount.

PEERLESS INDUSTRIAL GROUP Inc.

Your Link to Quality, Strength & Service Since 1917

Peerless Industrial Group has been innovating successful products for over 100 years. Today, as an industry leader in multiple market segments including lifting and rigging, cargo control and traction product solutions, we utilize our exceptional design, engineering, manufacturing, and quality teams, to develop crucial products for the wide variety of markets we serve.

Peerless is part of KITO Corporation's global network providing our customers access to cargo control, traction, overhead lifting, material handling, marine, and hardware products.
